Tuition and Fees

M.S in Physician Assistant Studies, 2026-2027

The Master of Science in Physician Assistant Studies program cost of attendance represents both direct expenses of tuition and fees as well as estimated indirect expenses you may incur for the six-trimester program. Direct expenses are billed by the school each trimester, while financial aid (including all federal loans) generally is awarded over a two-trimester period (e.g. as defining an academic year).

	Cost Per Trimester	Total Est. Program Costs*
Direct Costs		
Tuition	$20,440	$122,640
Fees	$390	$2,340
Total Direct Costs	**$20,830**	**$124,980**
Indirect Expenses**		
Books & Supplies	$750	$4,500
Housing & Food	$5,388	$32,328
Personal	$750	$4,500
Transportation	$1,000	$6,000
Loan Fees	$108	$648
Total Est. Cost of Attendance	$28,826	$172,956

*The estimated total direct cost/ tuition and fees to complete the M.S. in Physician Assistant Studies, based on the 2026-2027 academic year rates and a six-trimester curriculum, is $124,980. Tuition and Fees are subject to adjustments authorized by the Northeast College Board of Trustees. In such cases, due notice will be given. Indirect costs are estimates and may vary due to individual factors. For further details regarding cost of attendance, refer to the *Northeast College Catalog*.

**The indirect expenses indicated above are only an estimate and may be different for each individual student based on individual factors such as location of residence, distance from clinical rotation sites, need for housing when at distant clinical rotation site, etc.

- As a hybrid program, students are required to be on campus for the entirety of the first trimester and the first two weeks of the 4th trimester (i.e., the very beginning of the second year). Students must be also on campus in the last 1-2 weeks of the program for their end-of-program examinations/evaluations.
- Travel and housing expenses, particularly in the clinical phase (i.e., second year) of the program can vary significantly based on individual student circumstances.
- Students can opt to live on campus for any portion of or the entire two years of the program to benefit from the Northeast College's low housing and food costs. On-campus housing and food costs are estimated at $4,512 per trimester.
- Estimated potential travel and housing expenses to attend distant clinical rotations is based on the program requiring students to complete nine 5-week rotations.
    - Researching flight costs to currently planned clinical rotations, it is estimated that the average cost for students needing to fly to different rotations sites is $380 per flight. If a student needed to fly to all 9 rotations and fly to campus for the on-campus requirement, the estimated flight costs would be $3,700 (10 round trip flights at $370.00).
    - Researching housing costs near the location of currently planned clinical rotations, it is estimated that the average costs for students needing housing to complete distant clinical rotations is $5,954 per trimester (~$1984 per 5week rotation). If a student needed non-campus housing for all nine rotations, the estimated housing costs would be $17,862.
    - Total flight and additional housing expenses for students who need to fly to all nine clinical locations and fly to campus for the first two weeks of the fourth trimester is estimated at $21,562.
