Totally Dedicated to Healthcare
At Northeast College of Health Sciences, students find a campus tailored to helping them follow their calling to heal. They gain the evidence-based knowledge, skills, and experience they need to become successful professionals who reimagine health and transform lives.

The Northeast College Difference
For more than a century, Northeast College of Health Sciences has been educating the best doctors of chiropractic in the world. Our students are supported by knowledgeable faculty, state-of-the-art laboratories and a wide range of hands-on clinical experiences. This immersive chiropractic education enables our students to graduate as well-prepared healthcare providers with a scholarly perspective and intensive real-world experience.

The Doctor of Chiropractic program advances the mission, vision, and values of Northeast College by preparing doctors of chiropractic who provide primary and collaborative care, with an emphasis on neuromusculoskeletal conditions and overall patient wellness.

Northeast’s Doctor of Chiropractic program consists of:
- A professional degree earned over 10 trimesters (3 years, 4 months)
- 217 credit hours of core courses, with a minimum of nine credit hours of elective courses
- First-hand respect and understanding of the human body through cadaveric dissection—a gold standard in medical education
- Immediate immersion in practice with hands-on adjustment beginning as early as the second trimester
- More than one year of practical clinical experiences including opportunities in hospitals, Veteran Administration sites, college and university health centers, sporting events and multidisciplinary and private office settings

The program has been accredited through the Council on Chiropractic Education (CCE) since 1977.

95%
- of Northeast College graduates surveyed are still in practice seven years after graduation.
- of Northeast College graduates surveyed secured a position within six months of graduation.

What is Chiropractic?
Chiropractic healthcare’s emphasis on the musculoskeletal and nervous systems and how they impact the human body’s overall health and wellness complements more traditional health interventions and is increasingly integrated into the larger healthcare picture. Of particular value is the approach that doctors of chiropractic take, assisting patients through drug-free, hands-on treatments and techniques. Chiropractors are experts in spinal adjustment but are also well-trained in nutritional and lifestyle counseling and in recommending rehabilitative and therapeutic approaches and services. Chiropractors focus on the person as a whole, using diagnostic skills that consider every determinant of a person’s health and well-being.

This whole-person-centered approach of chiropractic healthcare has been found to improve patient wellness and satisfaction. Costs to patients and medical insurance companies, as well as personal and social costs, are lower as a result. Chiropractic care is at the leading edge of healthcare in its recognition that individuals should be treated as the whole human beings they are, with all parts and systems impacting all others, and its insistence that nonpharmacological therapies are often the first and best choice for optimal patient care.

Thoroughly Prepared
Northeast College Doctor of Chiropractic program graduates are deeply dedicated and expertly prepared to:
- Embody the principles of academic excellence and transformative patient-centered care through the analysis of evidence, application of best practices, and incorporation of patient values in clinical assessment, diagnosis, chiropractic technique, case management, and documentation
- Exhibit and value integrity, compassion, and ethical principles in alignment with the professional standards of chiropractic
- Demonstrate effective leadership
- Powerfully advocate for their patients and the chiropractic profession

Post-Graduation Career Options
Northeast College graduates have chosen a wide variety of career options, including private practice and associate positions; working in hospitals, healthcare, universities, and multidisciplinary settings; and professional affiliations with sports teams of all levels.
